

CASE STUDY: DIESEL GENERATOR PACK.

LOCATION: OFFSHORE PLATFORMS

MARKET: OFFSHORE

REQUIREMENT: A system was required for the protection of internal surfaces, electrics and electrical boxes, moving parts and external areas.

SOLUTION:

CCI 450 was sprayed onto all exposed electrics and the electrical boxes were treated with CCI V100 Tape.

CCI 300M was added to the lubricating system and misted into the injectors.

CCI Powder was blown into the main cavities.

CCI 350 was applied to all moving parts and

CCI 400 was sprayed on to all external surfaces.
