

### Introduction

At Kent Offshore we are committed to environmental stewardship and sustainable practices in all aspects of our operations. As an asset preservation specialist with expertise in wrapping and coatings, we understand the importance of reducing environmental impact while delivering high-quality solutions to our clients. This statement outlines our approach to environmental management, including our pursuit of relevant ISO certifications and commitment to calculating and reducing our carbon footprint.

### Environmental Commitment

We are dedicated to implementing an environmental management system that:

1. Complies with applicable legal and regulatory requirements.
2. Minimises waste and promotes resource efficiency.
3. Reduces greenhouse gas emissions through targeted CO2 reduction initiatives.
4. Supports sustainable development goals through innovation and collaboration.

### ISO Certification Goals

To ensure robust environmental practices, we are working towards achieving the following certifications:

- **ISO 14001 (Environmental Management):** To systematically reduce our environmental impact and enhance our environmental performance.
- **ISO 50001 (Energy Management):** To improve energy efficiency and reduce energy-related emissions.

These certifications will demonstrate our commitment to internationally recognised standards and continuous improvement.

### Environmental Management Practices

To achieve our objectives, we have implemented the following practices:

- Conducting regular environmental risk assessments to identify and address potential impacts.
- Developing and maintaining a CO2 reduction plan, including energy efficiency improvements and adoption of renewable energy sources.
- Minimising waste through efficient material use and promoting recycling initiatives.
- Training employees on environmental awareness and best practices.

## Environmental Management Policy - 2025 2

### CO2 Footprint Calculation and Reduction

We calculate our carbon footprint annually to identify key sources of emissions and set reduction targets. In 2024, our calculated CO2 footprint was 1,200 metric tonnes. Key contributors included:

- Energy use: 60%
- Transportation: 25%
- Material waste: 15%

Our goal is to achieve a 20% reduction in emissions by 2030 through the implementation of energy-efficient technologies, optimised logistics, and sustainable material sourcing.

### Alignment with Sustainable Development Goals

Our environmental management efforts align with the United Nations Sustainable Development Goals, particularly:

**Goal 12:** Responsible Consumption and Production.

**Goal 13:** Climate Action.

**Goal 9:** Industry, Innovation, and Infrastructure.

### Monitoring and Reporting

We are committed to transparency and accountability in our environmental performance. Progress will be monitored through:

- Annual carbon footprint reporting.
- Regular audits of environmental management systems.
- Public disclosure of key environmental metrics.

### Future Plans

Looking ahead, we aim to:

- Achieve ISO 14001 and ISO 50001 certifications by September 2025.
- Invest in renewable energy projects to offset emissions.
- Collaborate with clients and suppliers to develop environmentally friendly solutions. Approval and Publication

### Approval and Publication

This statement has been approved by board of directors and is signed by Lee Powell Managing Director. It will be reviewed and updated annually to reflect our ongoing efforts and evolving practices.
